

Looking for a program that provides you with the opportunity to easily create user interfaces? Start using StyleControls. The software enables you to quickly and easily create and customize interfaces for programs, web pages or websites. What can StyleControls do? The software allows you to change the background color of controls and their components, insert labels or text in interface controls, change fonts and create unique applications. You can personalize components that are used in your program, such as buttons, menus, context menus and drop down lists. You may also create buttons, menus and custom views for your applications. Moreover, the software includes a SystemThemes component that allows you to style the interface elements for your application and change the colors. Moreover, you may apply a custom border, shadow, glow or animation effects to all components in your interface. Using the tool, you may even create special effects such as glowing text. The software supports XE5, XE6 and XE7 and can be used by beginners or advanced users. How does StyleControls work? The software offers a set of components that you can use to personalize your interface. All the components and tools can be easily used through an easy to use interface that enables you to apply the changes to the interface.

1. The Classic editor Using the classic interface, the software enables you to create new controls, change the appearance and position of the interface elements, edit backgrounds, fonts and colors, as well as edit actions triggered when a button is clicked or hovered over.
2. The Drawing tool The classic interface includes a drawing tool that allows you to create new controls, edit controls or labels, add a border to the interface and fill the space with a background.
3. The Controls tool The tool lets you create your own controls, customize their appearance, change properties and add actions, such as specific behavior when a button is clicked or when it is hovered over.
4. The components tool The software includes a set of VCL controls that you can add to your interface and edit their properties. The components are the basic elements in your application interface.
5. The background components tool Using the tool, you can customize the appearance of interface elements such as buttons, menus, text or any other elements. You can use a palette of available colors, change the font and background and apply effects such as shadowing, highlighting or glow.
6. The styles tool The tool lets you customize the appearance of your interface
