The TomaDesk is a utility that displays a set of workspaces, each with its own desktops and programs. The desktops can be configured to appear as columns or rows. The software's display settings, such as the resolution, desktop scaling and workspace size, can be set in TomaDesk's configuration file. This is a very useful tool for people who need to have a task

If you are running a Windows 2000, XP, Vista, or Windows 7 OS you can use the TomaDesk Sizer (Beta) program to resize the desktops in a TomaDesk. You will be able to resize the workspaces to multiple screen sizes, even when using a dual monitor setup.

Supports session export/import With TOM's session export feature, you can save a session in your hard disk and launch it later.
